## Front derailleur and crankset

C-447

The allowable combinations of front derailleurs depend on the difference in the number of teeth of the gears and the shape of the front derailleur plate.

If the conditions given below are not satisfied, then the desired shiftability may not be obtained.

$$\begin{aligned} &FC \text{ (largest chainring)} - \text{(smallest chainring)} \leq FD \text{ (high and low capacity)} \\ &FC \text{ (largest chainring)} - \text{(middle chainring)} = FD \text{ (allowance of difference in teeth number between top and middle)} \end{aligned}$$

Each front derailleurs and the number of teeth of corresponding cranksets are given in the compatibility chart.

## Front derailleur and chain line (TOURNEY)

C-448

The SHIMANO line-up for front derailleurs and the chain lines they support are given in the chart below.

**Narrow type rotor**

#### **NOTE**

- SM-RT56 / SM-RT54 / SM-RT30 / SM-RT26 / SM-RT10 / RT-EM300 / [RT-CL300](#) are compatible with Resin pad caliper specification only. If use with metal pads, rotor will be easily damaged.
- When using 140 mm rotor, braking power is less than 160 mm, please confirm the power is enough for your purpose. 140 mm rotor is recommended for rear use only.
- Narrow type 2 piece rotors are not compatible to brake caliper for Wide type rotor because of interference.
- BR-UR300 doesn't need front mount bracket and rear adapter.

## Compatibility between brake systems

C-466

Depending on the brake and brake lever combination to be used, the relationship between the input at the brake lever and the actual braking force output at the wheels is very easily affected.

Be very careful when combining a brake and brake lever. Incorrect combinations can cause accidents or insufficient braking forces due to improper cable strokes. Be sure to carefully consult the chart below and select the brake and the matching brake lever.

\* POWER MODULATOR must be used for front brake

The "NO!" symbols indicate combinations that should not be used under any circumstances.

### NOTE

This combination will not provide the sufficient amount of braking force.

## Brake lever with switch compatibility

C-467

Four finger brake levers such as brake levers are equipped with a switch to change between the V-BRAKE with modulator mode (for example with SM-PM40) and the caliper brake or roller brake mode.

### For V-BRAKE (with POWER MODULATOR) mode C-468

### For Caliper brake / Roller brake C-469

BL-C6010

## Other models

\* 3 types of caliper brake is available (SLR-EV / NEW SUPER SLR / SUPER SLR)

Please refer Spec Hand Book for caliper brake compatibility.

Some models can't be used with roller brake, please refer to [C-466](#) for more information.

### WARNING

If the mode is not matched to the type of brake being used, this could result in inadequate or excessive braking power. Please proceed with caution when selecting the correct mode for the corresponding brake.

(\*2) Refer to DIN 79010:2020-02 5.5.2.2.2 about "c" value.

c: weight factor which is defined by bike design.  $c = (AL: \text{axle load}) / (M: 100 \text{ kgf as basic value})$ .

For example, axle load is allowed till 150 kgf if  $c = 1.5$ .
